

A solid start to our second century

“We are proud to build a European base metal champion.” – Mikael Staffas, President and CEO.

SEK m	Quarter			12 months	Full-year
	1-2025	1-2024	4-2024	Apr-Mar	2024
Revenues	21,121	18,481	25,785	91,848	89,207
Operating profit ex. revaluation of process inventory	2,599	1,212	3,814	13,411	12,025
Operating profit	3,062	1,615	4,098	15,139	13,692
Profit after financial items	2,757	1,411	3,765	13,900	12,555
Net profit	2,192	1,139	2,994	11,079	10,026
Earnings per share, SEK	7.99	4.16	10.95	40.46	36.65
Free cash flow	-1,869	-1,508	4,264	2,302	2,663
Net debt	8,728	12,386	10,662	8,728	10,662
Return on capital employed, %				18.9	17.6
Return on equity, %				17.8	16.7
Net debt/equity ratio, %	13	21	16	13	16

- Operating profit excluding revaluation of process inventory totaled SEK 2,599 m (1,212)
- Strikes in Finland had an estimated SEK -100 m (-400) effect on operating profit
- Free cash flow was SEK -1,869 m (-1,508) negatively impacted by an increase in working capital but positively impacted by SEK 350 m insurance proceeds
- Higher metal prices and a stronger USD contributed positively versus the first quarter of 2024
- Lower milled volume and recoveries in Aitik
- The ramp-up of Tara is progressing well
- Odda has started the commissioning of its expansion project
- Lower treatment charges and premiums
- Boliden raised SEK 3.75 billion from a directed share issue

CEO's statement

A solid start to our second century

When this report is published, we have recently closed the acquisition of Somincor and Zinkgruvan and we are of course thrilled by the opportunities this offers. Not only are we growing our mining operations for zinc and copper – we are also positioning ourselves as the leading European provider of base metals. On top of that, we are very optimistic about the geological potential in these areas, similar to the opportunities we have seen and made good use of around our other mining units. The integration of the two new producing units, the ongoing commissioning of the Odda expansion and the investments in the Boliden Area as well as

in a new tankhouse at Rönnskär will bring value to many, not least our shareholders.

The major event, during the first quarter, was the inauguration of our expansion project in Odda. It is now well under way to become both the world's most productive zinc smelter as well as the world's most climate effective. Even if the project has had its challenges, it is a fantastic achievement that we will benefit from in many years to come. We have also had challenges in our open pits, especially in Aitik, where we expect the throughput to be lower than normal this year due to a challenging geology in the areas we currently mine. On the positive side, we see that the grades next year are picking up in both Aitik and Kevitsa. In addition, our underground mines produced well and as we have stated several times before, having a mix of metals in our portfolio increases stability in earnings, which is important over time.

In our smelter operations, we see a healthy profit despite somewhat challenging market conditions. In Finland, strikes affected production in the quarter. Worth noticing is also a lower gold production primarily due to lower gold content in the feed at Harjavalta and Rönnskär. All in all, however, I can conclude that we have competitive smelters with a sound focus on profitability.

Looking forward, we follow global developments regarding newly introduced and potential future trade barriers very closely. So far, base metals have not been pointed out to a larger extent than other commodities, and being a large metal provider in Europe, which to a large extent is dependent on imports, gives us a solid base. However, global metal prices as well as currencies

fluctuate more than usual, which I would argue is normal given the uncertain circumstances, and after the quarter-end we have seen deteriorated base metal prices and a lower USD. It is therefore of immense importance that we continue to focus on the factors that we can influence. That includes further development of our safety culture, stable and efficient production, and efficient execution on investment projects.

We are proud to build a European base metal champion. I feel we are in a very good position going forward, even in these volatile times.

Mikael Staffas
President and CEO

Outlook for the second quarter and full year 2025

Somincor and Zinkgruvan are consolidated into Boliden per April 16. Boliden's 2025 production and cash cost guidance for these units is as shown in the adjacent table.

Production and cash cost for Somincor and Zinkgruvan

	April 16 – December 31, 2025		
	Production*, tonnes		Cash cost**, USD/lb
	Zn	Cu	
Somincor	80,000	20,000	1.95
Zinkgruvan	60,000	3,000	0.40

* Metals in concentrate

** Normal costing

- Costs that are contingent on the closing of the Somincor/Zinkgruvan transaction amounting to approximately SEK 150 m, will be recorded in the second quarter
- Capital expenditure is estimated to be SEK 15.5 billion for the full year 2025. The SEK 1.5 billion increase, relative to previous guidance, relates entirely to Somincor and Zinkgruvan
- Full year 2025 milled volume in Aitik is estimated to be close to 40 Mtonnes
- Full year 2025 milled volume in Tara is expected to be 1.8 Mtonnes
- The grade guidance for Aitik, Garpenberg, Kevitsa, the Boliden Area and Tara for the full year 2025 is unchanged compared to the previous guidance
- The zinc grade in Garpenberg during the second quarter is expected to be lower than the full year average
- Planned maintenance shutdowns in Smelters during 2025 are estimated to impact operating profit by SEK -500 m of which SEK -400 m in the second quarter

- Cash flow in 2025 will be positively impacted by approximately SEK 2,000 m from insurance proceeds related to the Rönnskär fire, out of which SEK 350 m has been received
- After the end of the first quarter, the global economic developments have deteriorated and the degree of uncertainty around prices and terms has increased. Base metal prices and the USD have weakened substantially and for Boliden this has only partially been offset by strong precious metal prices
- The direct impact on Boliden of announced global tariffs is so far limited

Analysis of operating profit

SEK m	Quarter		
	1-2025	1-2024	4-2024
Operating profit	3,062	1,615	4,098
Revaluation of process inventory	463	403	285
Operating profit ex. revaluation of process inventory	2,599	1,212	3,814
Change		1,387	-1,215
Analysis of change			
Volumes		637	-676
Prices and terms		1,338	-212
Metal prices		1,192	7
By-product prices		168	43
TC/RC terms		-234	-212
Metal premiums		-109	-23
Exchange rate effects		322	-27
Costs		-359	583
Depreciation		-201	54
Items affecting comparability		-90	-935
Other		63	-29
Change		1,387	-1,215

Compared to the first quarter 2024, operating profit excluding revaluation of process inventory increased to SEK 2,599 m (1,212). Volumes increased primarily due to the restart of Tara and less negative effects from strikes in Finland. Prices and terms also improved, as higher metal prices and a stronger USD outweighed lower treatment charges and premiums. More external services and consumables contributed to higher costs. Depreciations increased due to the dam project in Aitik and the ramp-up of Tara. The total strike impact on Boliden's operating profit in the first quarter of 2025 is estimated to be approximately SEK -100 m, compared to SEK -400 m in the first quarter of 2024. The first quarter of 2024 included a positive impact of SEK 90 m from sold royalties in respect of the previously divested Canadian mine, Premier Gold.

Compared to the previous quarter, operating profit excluding revaluation of process inventory decreased by SEK 1,215 m. The previous quarter included an insurance income of SEK 935 m. Adjusted for this insurance income the result decreased by SEK 280 m. Lower ore grades and less free metals contributed negatively to volumes. Lower treatment charges and premiums had a

negative impact on prices and terms. Costs, on the other hand, were lower partly thanks to less external services.

Profit after financial items totaled SEK 2,757 m (1,411). Net profit was SEK 2,192 m (1,139), corresponding to earnings per share of SEK 7.99 (4.16). Return on capital employed and return on equity for the past 12 months were 18.9% and 17.8% respectively.

Capital expenditure

Capital expenditure totaled SEK 2.9 billion (3.4). Mine sustaining capital expenditure amounted to SEK 1.1 billion (0.8). The investment in the Odda zinc smelter with the aim of increasing the annual production volume from 200 to 350 ktonnes, while in parallel enabling the extraction of additional by-products, is in a commissioning phase. The investments undertaken have included reinforced power supply and quay infrastructure as well as a new roasting furnace, a new sulphuric acid plant and the expansion and modernization of the leaching and purification plant, a new tankhouse and the expansion of the foundry. Full production in Odda is estimated to be achieved during late 2025.

Production from Rävliiden in the Kristineberg mine, in the Boliden Area, is ramping up. In the Boliden Area, investments also continued in the new tailings sand recycling project, which will enable production until the end of the 2030s. The tankhouse project in Rönnskär is well under way. Production of copper cathodes and precious metals in Rönnskär is planned to gradually increase to full capacity during the second half of 2026. The group total capital expenditure is estimated to be SEK 15.5 billion for the full year 2025. The SEK 1.5 billion increase, relative to previous guidance, relates entirely to Somincor and Zinkgruvan.

Cash flow

SEK m	Quarter			12 months	Full-year
	1-2025	1-2024	4-2024	Apr-Mar	2024
Cash flow from operating activities before change in working capital	3,461	1,749	5,127	17,449	15,737
Change in working capital	-2,435	187	3,733	-700	1,922
Cash flow from operating activities	1,026	1,935	8,861	16,749	17,659
Cash flow from investing activities	-2,895	-3,444	-4,597	-14,448	-14,996
Free cash flow	-1,869	-1,508	4,264	2,302	2,663

Free cash flow totaled SEK -1,869 m (-1,508), negatively impacted by an increase in working capital. Insurance proceeds of SEK 350 m, related to the Rönnskär fire in June 2023, was received in the quarter. Another approximately SEK 1,650 m in insurance proceeds are expected for the remainder of 2025. In the first half of 2026 the remaining SEK 335 m insurance proceeds is expected to be received.

Net financial items and financial position

Net financial items totaled SEK -305 m (-203). Average interest rate on loans was 4.3% (4.2). Net debt at the end of the quarter amounted to SEK 8,728 m (12,386) and net debt/equity ratio was 13% (21). In addition, net reclamation liability was SEK 3,869 m (3,452). The average maturity of committed loan facilities was 3.0 (3.0) years. The fixed-interest duration on utilized loans was 1.5 (1.1) years. At the end of the quarter, net payment capacity in the form of cash and cash equivalents and unutilized binding credit facilities with a term of more than one year totaled SEK 18,070 m (14,559), excluding the bridge financing for the acquisition of the mines Somincor and Zinkgruvan.

Net debt/equity ratio, at the end of the quarter

Return on total capital, rolling 12 months

New loan and bond issue

During the quarter, a new bilateral loan agreement was signed. The loan is for SEK 600 m and matures in 2031. Boliden also issued a bond, totaling SEK 800 m with terms of 7 years, under Boliden's Medium Term Note program.

Directed share issue to partly finance the Somincor and Zinkgruvan acquisition

On March 20, 2025, Boliden completed a directed share issue without preferential rights for existing shareholders. On that day, Boliden carried out a placement of 10,714,285 newly issued shares at a subscription price of SEK 350 per share based on authorization granted by the extraordinary general meeting on January 23, 2025. Through the share issue Boliden raised SEK 3.75 billion before transaction costs. A number of Swedish and international institutional investors participated in the share issue.

As of March 31, 2025, the total number of shares in Boliden is 284,225,454. Accordingly, the number of votes in Boliden as of March 31, 2025, amounts to 284,225,454 and the share capital amounts to SEK 601,592,217.

Market developments

Global manufacturing showed tentative signs of recovery during the quarter, with the manufacturing PMI hovering just above 50, though regional divergences persisted. India, China, and parts of Southeast Asia posted solid growth, while Japan, the UK, and the eurozone remained weak. Towards the end of the quarter, escalating trade tensions fueled market volatility. The gold price continued its upward trajectory, surging to record highs. Zinc and nickel came under pressure from weaker demand outlooks and protectionist risks, while copper prices held up better.

The average price of zinc, nickel and lead retreated relative to the previous quarter, whereas copper gained marginally. Gold and silver maintained their upward momentum. Copper concentrate treatment charges (TCs) on the spot market declined further into negative territory, while zinc TCs recovered and turned positive during the quarter. The USD weakened slightly against both the EUR and SEK compared to the previous quarter.

Average metal prices and exchange rates

	Quarter		
	1-2025	1-2024	4-2024
Zinc, USD/tonne	2,838	2,450	3,050
Copper, USD/tonne	9,340	8,438	9,193
Nickel, USD/tonne	15,571	16,589	16,038
Lead, USD/tonne	1,970	2,077	2,007
Gold, USD/oz	2,859	2,071	2,664
Silver, USD/oz	31.9	23.3	31.4
USD/SEK	10.67	10.40	10.78
EUR/SEK	11.23	11.29	11.50

Zinc

Global demand for refined zinc decreased by 11% versus the previous quarter and 3% versus the first quarter of 2024. Zinc metal premia were stable versus the previous quarter. Global zinc concentrate production fell by 4% versus the previous quarter, also down 2% compared to the first quarter of 2024. Spot TCs for standard qualities recovered significantly from previous-quarter lows.

The 2025 benchmark TC for zinc has been settled at 80 USD/tonne, according to Wood Mackenzie, down from 165 USD/tonne in 2024, reflecting expectations of a recovery in zinc concentrate supply.

The LME zinc price fell 7% versus the previous quarter reflecting weaker demand and declining market sentiment.

Zinc price

Global zinc demand, rolling 12 months

Copper

Worldwide consumption of refined copper decreased by 8% versus the previous quarter, along with concentrate production, which decreased by 9% over the same period. Standard grade spot treatment charges showed no signs of recovery, falling further and remaining firmly negative.

The LME copper price on average increased marginally by 2% versus the previous quarter.

In the copper sector, annual TC/RC agreements have been settled at 21.25 USD/tonne and 2.125 US\$/lb between Chinese smelters and major miners. Japanese and Korean contracts have finalized at higher rates. Boliden anticipates that copper concentrate contracts will be established within this range.

Copper price

Global copper demand, rolling 12 months

Nickel

Global nickel demand slipped by 1% versus the previous quarter, although gaining 3% compared to the first quarter of 2024. The LME nickel price continued to struggle, falling by 3% versus the previous quarter and 6% versus the first quarter of 2024.

Nickel price

Global nickel demand, rolling 12 months

Lead

Global market demand for lead fell by 7% compared to the previous quarter, with concentrate production falling by 18% and 6% compared to the previous quarter and the first quarter of 2024 respectively. The LME price of lead fell by 2% versus the previous quarter.

Precious metals

Both gold and silver continued their stellar performance, driven by market turmoil and safe-haven demand.

Gold and silver price

Sulphuric acid

The spot price for sulphuric acid experienced some volatility during the quarter, but on average gained 10% compared to the previous quarter.

Data in the Market developments section comes from CRU Ltd, Bloomberg and Wood Mackenzie.

Mines

Boliden had five mining areas – Aitik, Boliden Area, Garpenberg, Kevitsa and Tara in the first quarter of 2025. Development in the Business Area is pursued jointly in the form of exploration, mine development, technology and environment.

- Lower milled volume and recoveries in Aitik
- The ramp-up of Tara is progressing well
- Operating profit increased to SEK 1,339 m (948)

SEK m	Quarter		
	1-2025	1-2024	4-2024

Items affecting comparability		-90	-
Other		5	-57
Change		391	187

Compared to the first quarter 2024, the operating profit increased to SEK 1,339 m (948). The increase was primarily due to higher gold, silver and copper prices. Volumes contributed marginally positively thanks to the ramp-up of Tara, despite lower production in Aitik. The restart of Tara and more external services and exploration activities in general contributed to higher costs. Depreciations increased due to the dam project in Aitik and the ramp-up of Tara. The first quarter of 2024 included a positive impact of SEK 90 m from sold royalties in respect of the previously divested Canadian mine, Premier Gold.

Compared to the previous quarter, the operating profit was SEK 187 m higher. Prices and terms contributed positively despite a weaker USD. Volumes contributed negatively. The positive volume effect from the ramp-up of Tara was offset by production issues in Aitik along with lower grades in both open pits. Costs decreased due to less external services.

Production

Metal in concentrate

	Quarter				
	1-2025	1-2024	%	4-2024	%
Zinc, tonnes	57,914	39,727	46	41,680	39

Lead, tonnes	12,110	11,858	2	10,896	11
Gold, kg	1,279	1,286	-1	1,316	-3
Silver, kg	93,559	81,089	15	84,253	11

Information about production and metal grades at each respective unit can be found on pages 30-32.

Milled volume was lower compared to both the previous quarter and the first quarter of 2024, primarily due to lower production in Aitik. This contributed to a lower production of copper in concentrate relative to both comparison periods. The production of zinc in concentrate was significantly higher than both the previous quarter and the first quarter of 2024. The ramp-up of Tara in combination with higher milled volume in both Garpenberg and the Boliden Area had a positive effect. Production of gold in concentrate was broadly flat relative to both comparison periods. A higher recovery in Kevitsa counteracted lower grades in the Boliden Area. The production of silver in concentrate increased compared to both the previous quarter and the first quarter of 2024. Higher grades in the Boliden Area contributed positively.

Aitik's milled volume was lower than both the previous quarter and the first quarter of 2024. Hard to grind ore from the main pit, containing diorite, had a negative impact. The diorite intrusion will continue to impact Aitik during this year. As such, Aitik's estimated 2025 milled volume is close to 40 Mtonnes. This estimate was announced in a separate press release on March 5. In addition, due to surface mining, the ore is oxidized which impacted first quarter recoveries negatively. Grades were in line with earlier guidance, but as a consequence of the above challenges, production of copper in concentrate was lower than both the previous quarter and the first quarter of 2024.

Garpenberg's milled volume was higher than the previous quarter, which was limited by its full year environmental permit of 3.5 Mtonnes. The milled volume was also higher than the first quarter of 2024. However, the zinc grade during the first quarter was lower than both the previous quarter and the first quarter of 2024. The silver grade was lower than the previous quarter but higher than

last year. The zinc grade in Garpenberg during the second quarter is expected to be lower than the full year average. This is in line with Garpenberg's 2025 full year mine plan. The production of both zinc and silver in concentrate increased relative to the previous quarter. Higher milled volume compensated for lower grades. For the full year 2025, Garpenberg's production will still be limited by existing permits. An application to increase production to 4.5 Mtonnes has been submitted. In parallel, studies are underway for further production increases.

Milled volume in Aitik, rolling 12 months

Milled volume in Garpenberg, rolling 12 months

The Boliden Area's milled volume was higher than both the previous quarter and the first quarter of 2024. The gold grade was slightly lower than both comparison periods. The production of zinc in concentrate was positively affected by higher milled volume but negatively affected by lower grade. All these effects are within normal variation and due to changes in the ore mix between the different mines in the Boliden Area.

Tara continued to ramp up its production in first quarter of 2025. Following a period of care and maintenance since July 2023, production recommenced in the previous quarter. Full year 2025 milled volume production is expected to be 1.8 Mtonnes. Tara's full production target is 2.2 Mtonnes per annum and it is expected to be reached by 2028.

Kevitsa's milled volume was stable but somewhat lower than both the previous quarter and the first quarter of 2024. The nickel grade during the first quarter was in line with the previous quarter but lower than the first quarter of 2024. The copper grade was lower than both comparison periods. As communicated in a separate press release on January 5, certain low-grade areas of the mine need to be prioritized in 2025.

Smelters

Boliden has five smelters – the Kokkola and Odda zinc smelters, the Rönnskär copper and lead smelter, the Harjavalta copper and nickel smelter, and the Bergsöe lead recycling plant.

- Negative impact from strikes in Finland
- Odda has started the commissioning of its expansion project
- Lower treatment charges and premiums
- Operating profit excluding revaluation of process inventory increased to SEK 1,025 m (505)

SEK m	Quarter		
	1-2025	1-2024	4-2024

Analysis of operating profit

SEK m	Quarter		
	1-2025	1-2024	4-2024
Operating profit	1,488	908	2,712
Revaluation of process inventory	463	403	285
Operating profit ex. revaluation of process inventory	1,025	505	2,427
Change		520	-1,402
Analysis of change			
Volumes		440	-172
Prices and terms		-19	-652
Metal prices		265	-234
By-product prices		168	43
TC/RC terms		-359	-299
Metal premiums		-109	-23
Exchange rate effects		16	-139
Costs		74	332
Depreciation		-32	-3
Items affecting comparability		-	-935
Other		57	29
Change		520	-1,402

Compared to the first quarter 2024, operating profit excluding revaluation of process inventory increased to SEK 1,025 m (505). Prices and terms were marginally negative. Higher metal prices, in particular gold and zinc, and higher sulphuric acid prices, partly compensated for lower treatment charges and premiums. 2025 zinc concentrate deliveries have been valued at an average of 80 USD/tonne. Volumes increased primarily thanks to increased free metals. Costs decreased mainly as an effect of lower energy costs. The negative effect in Smelters from the strikes in Finland were lower relative to the first quarter of 2024.

Compared to the previous quarter, operating profit excluding revaluation of process inventory decreased by SEK 1,402 m, primarily due to that the fourth quarter of 2024 included an insurance income of SEK 935 m. Negative prices and terms, partially offset by higher gold prices, strikes in Finland along with somewhat less stable production in Harjavalta and Kokkola contributed negatively. However, this was partly compensated by less external services and lower cost for consumables.

Copper anodes are further processed into copper cathodes. Lead includes lead alloys in Bergsöe. Information about production at each respective unit can be found on pages 33–34.

No planned maintenance was carried out during the quarter, which was also the case in the previous quarter and the first quarter of 2024. Harjavalta and Kokkola were at the end of January negatively affected by a one week centrally imposed strike. However, strikes in Finland had an even more negative effect in the first quarter of 2024. The copper cathode production was higher compared to the first quarter of 2024. Higher production in Harjavalta partly compensated for no cathode production in Rönnskär. The copper cathode production was lower relative to the previous quarter. A shortage of favorable concentrates had a negative effect in both copper smelters. The production of casted zinc fell marginally versus both comparison periods. Kokkola had a relatively weak production quarter, while Odda was still negatively affected by its expansion project. The production of precious metals fell sharply versus both comparison periods due to less favorable raw materials.

Rönnskär's production of copper anodes was lower relative to the previous quarter but higher than the first quarter of 2024. Lack of favorable concentrates had a negative effect. Production of gold was lower relative to both comparison periods due to lower grades in the feed. The silver production decreased relative to both comparison periods due to reduced process stability. The new tankhouse project in Rönnskär is well under way. Production of copper cathodes and precious

metals will gradually increase to full capacity during the second half of 2026. In addition, in early March a new productivity program was launched. This program will reshape Rönnskär's organizational setup, targeting an annual cost reduction of SEK 500 m.

Harjavalta's copper cathode production did not reach the previous quarterly record but exceeded production in the first quarter of 2024. The strike and an unfavorable concentrate mix had a negative effect. High consumption of pyrite was needed in the feed mix to maintain the heat balance in the copper production. However, anodes received from Rönnskär improved the utilization rate in Harjavalta's tankhouse. The production of nickel in matte was strong but could not match the previous quarterly record. An electrode failure in the electric arc furnace impacted negatively. The production of gold was lower compared to both comparison periods due to less gold in raw materials. In addition, precious metal slime was directed to Rönnskär for process optimization reasons.

Kokkola's production of casted zinc was lower relative to both the previous quarter and the first quarter of 2024. Unplanned maintenance in the roasters and the strike had a negative effect.

Odda's production of casted zinc was higher than both the previous quarter and the first quarter of 2024. The expansion project, which has affected ongoing production negatively, is in a commissioning phase. During the second quarter, testing and commissioning of the new facilities will be gradually implemented. Ramp-up to full production will take place in the second half of 2025.

Bergsöe's production of lead alloys was lower than both comparison periods due to issues with the breaker.

Maintenance shutdowns

No planned maintenance shutdowns were carried out during the first quarter of 2025. Maintenance shutdowns in Smelters during 2025 will have an estimated impact on operating profit of SEK -500 m (-400), of which SEK -400 m (-350) in the second quarter, SEK -50 m (-50) in the third quarter and SEK -50 m (0) in the fourth quarter. The 2025 full year figure is in line with what has previously been communicated.

Sustainable development

	Quarter			12 months		
	1-2025	1-2024	4-2024	Apr-Mar	2024	Target 2025
Accidents (LTI) per million hours worked	3.7	5.1	2.3	4.7	5.1	0
Sick leave, %	5.9	5.5	5.6	5.3	5.2	≤ 4.0
Sulphur dioxide to air, ktonnes	1.5	1.4	1.6	6.0	5.9	≤ 6.0
Number of significant environmental incidents ¹	0	0	0	0	0	0
	1-2025	1-2024	4-2024	Apr-Mar	2024	Target 2030
Direct GHG emissions (Scope 1), ktonnes CO ₂ e ²	163	153	165	658	647	-
Indirect GHG emissions (Scope 2), ktonnes CO ₂ e	52	50	54	209	207	-
Total GHG emissions (Scopes 1 and 2), ktonnes CO ₂ e	215	203	219	867	854	- 42% ³

¹ A serious incident that causes or has the potential to cause significant environmental impact.

² Land use change (LUC) emissions not included. The LUC emissions for 2024 amounted to 11 ktonnes (17 ktonnes).

³ The target for 2030 is compared to base year 2021, when total GHG emissions were 999 ktonnes CO₂e (incl. LUC emissions).

⁴ Starting from January 1st, 2025, new definitions for counting full time equivalents (FTEs) and headcount were implemented. In the new FTE definition, overtime and flexible working hours are included. Headcount is now defined as the number of working agreements that the company has with employees, including employees on leave.

Employees

The average number of full-time equivalent employees⁴ (FTEs) for the quarter was 6,143 (5,529). The increase in FTEs is due to the Tara mine now being fully manned, compared to being in care and maintenance during the same period last year. In addition, the inclusion of overtime in the FTE definition and production changes at Odda and Garpenberg contributed to the increase.

The accident frequency for own employees and contractors increased compared to the previous quarter, although it was lower compared to the same period last year.

Sick leave was higher than the previous quarter and the first quarter of 2024.

Lost Time Injury Frequency, rolling 12 months¹

¹ Number of accidents per one million hours worked.

Sick leave rate, rolling 12 months

External environment

Boliden aims to reduce its Scope 1 and 2 greenhouse gas (GHG) emissions by 42% by 2030, compared to baseline 2021. The Group's absolute GHG emissions for the quarter were in total lower than the previous quarter but higher than the first quarter of 2024. The decrease compared to previous quarter can partly be explained by lower diesel usage in Aitik, where the dam project has now been concluded, and by less electricity consumption in Kokkola.

The minor increasing trend of sulphur dioxide emissions seen in previous quarters remains, although first quarter emissions were lower than the previous quarter. Emissions from Kokkola will remain on elevated levels until the leaking heat exchanger is replaced in May 2025.

No significant environmental incidents were confirmed during the quarter. However, an environmental incident occurred in Rönnskär when elevated arsenic levels at the central treatment plant were released. This was due to high incoming arsenic levels combined with elevated pH, leading to poor purification at the treatment plant. No permit levels were exceeded.

Significant environmental incidents, rolling 12 months²

² Number of incidents, average per month.

Total greenhouse gas emissions, rolling 12 months³

³ Total GHG emissions, ktonnes CO₂e (Scope 1 and 2).

Other events

Nautanen: New mining concession

On February 13, 2025, the Swedish Chief Mining Inspector granted a mining concession for the Nautanen copper deposit, close to Aitik. In addition to copper, the mining concession includes molybdenum, silver and gold. The mining concession has not yet entered into legal force and has been appealed. An environmental permit is also required before any mining activities can be carried out.

Events after the reporting period

The completed acquisition of Somincor and Zinkgruvan and its financing

On December 9, 2024, Boliden announced that it had entered into a definitive agreement with Lundin Mining to acquire the mines Somincor-Sociedade Mineira de Neves-Corvo S.A. (Somincor) in Portugal and Zinkgruvan Mining Aktiebolag (Zinkgruvan) in Sweden. On April 1, the EU Commission approved Boliden's acquisition of the two mines. After having received all necessary regulatory approvals including merger control approval by the EU Commission, approval by the Swedish Inspectorate of Strategic Products under the Swedish FDI Act, the change of control approval under the Neves-Corvo Portuguese Concession Contract and the Fundamental Permits Approval, and after the satisfaction of all other closing conditions, the acquisition was completed on April 16, 2025, which was after the reporting period. Consequently, Boliden has acquired 100% of the shares in Somincor-Sociedade Mineira de Neves-Corvo S.A. and 100% of the shares in Zinkgruvan AB on April 16. The acquisition has a strong industrial logic and strategic fit, complementing current Boliden operations with two well-invested mines. The acquisition is expected to lead to a significant increase in production of metals in concentrate in Business Area Mines.

The acquired companies are part of the Boliden Group as of April 16.

The cash consideration paid to the seller on April 16, 2025, amounted to USD 1,402 m and consisted of a purchase price of USD 1,300 m on a debt and cash free enterprise value basis as of August 31, 2024 (locked-box date), adjusted for interest from the locked-box date and other customary adjustments.

The parties have also agreed on an additional contingent purchase price in cash that is dependent on average zinc price compared to agreed zinc reference price for Zinkgruvan AB and average zinc price and average copper price compared to the agreed zinc and copper reference prices for Somincor for the respective measurement periods. The maximum total amount of contingent consideration agreed is USD 150 m.

The acquisition was financed through a bridge loan and the directed share issue that raised SEK 3.75 billion for Boliden. The bridge loan will be refinanced through a temporary deviation from Boliden's dividend policy as proposed to the Annual General Meeting and through medium and long-term debt financing in line with what has previously been communicated.

Affirmation

The undersigned hereby affirms that this Interim Report provides a true and fair overview of the Parent Company's and Group's operations, positions and performance, and describes the material risks and uncertainty factors faced by the Parent Company and the companies that make up the Group.

Stockholm, April 23, 2025

Notes

Note 1. Interim Report preparation principles

The Consolidated Statements have been compiled in accordance with the EU-approved International Financial Reporting Standards (IFRS), and the Swedish Corporate Reporting Board recommendation, RFR 1, complementary accounting rules for Groups, which specifies the supplementary information required in addition to IFRS standards, pursuant to the provisions of the Swedish Annual Accounts Act. This Interim Report for the Group has been prepared in accordance with IAS 34, Interim Financial Reporting, and the Swedish Annual Accounts Act, and for the Parent Company in accordance with the Swedish Annual Accounts Act. The accounting principles and calculation methods have remained unchanged compared with those applied in the Annual and Sustainability Report for 2024.

Note 2. Risks and uncertainty factors

Significant risks and uncertainty factors for the Group and the Parent Company include market and external risks, financial risks, operational and commercial risks, and non-compliance risks. The global economic climate in general and global industrial production in particular affects demand for zinc, copper, and other base metals. For further information about risks and risk management, we refer to Boliden's Annual and Sustainability Report for 2024: Risk Management, on pages 42-46.

Note 3. Transactions with related parties

No significant changes or transactions with related parties have occurred during the quarter.

Note 4. Financial assets and liabilities

The fair value of derivatives is based on bid and ask prices listed on the closing date and by discounting estimated cash flows. Market prices for metals are taken from locations where metal derivatives are traded, i.e. the London Metal Exchange (LME) and the London Bullion Market Association (LBMA). Discount rates are based on current market rates per currency and time to maturity for the financial instrument. Exchange rates are obtained from Bloomberg. When presenting the fair value of liabilities to credit institutions, the fair value is calculated as discounted agreed amortizations and interest payments at estimated market interest margins. As of March 31, 2025, the interest terms of current loan agreements were adjudged to be level with market rates in the credit market. Thus, in essence, fair value corresponds to the carrying amount.

The carrying amounts of trade receivables and payables is considered to be the same as their fair value due to their short time to maturity, the fact that provisions are made for expected credit losses, and that any penalty interest will be invoiced. Boliden's financial instrument holdings, which are reported at fair value in the balance sheet, are all classified as level 2 items in the fair-value

hierarchy, with the exception of a small amount of level 3 holdings in other shares and participations. See also Accounting Principles in the Annual and Sustainability Report.

31 Mar 2025, SEK m	Reported value	Fair value

Liabilities to credit institutions	15,361	15,377
Trade and other payables	10,664	10,664
Derivative instruments	450	450
Total liabilities	26,475	26,491

Note 5. Breakdown of external income

The sale of metal concentrates, metals, intermediate products and by-products is recognized upon delivery to the customer in accordance with the terms and conditions of sale, i.e. revenue is recognized when control passes to the purchaser. The Group's metal concentrates are invoiced provisionally upon delivery. Definitive invoicing takes place once all relevant parameters (concentrate, quantity, metal content, impurity content and metal price) for the price setting period have been determined.

Customers are invoiced for the Group's metals and intermediate products upon delivery. The Group eliminates price risks associated with sales and purchases by hedging the difference between purchased and sold quantities on a daily basis. Customers are invoiced for by-products when control is transferred, which takes place upon delivery.

The increase in sales of intermediate products is due to Rönnskär's modified business model after the fire with sales of anodes instead of cathodes.

Note 6. Sensitivity analysis

The table below presents an estimate of how changes in market terms would affect the Group's operating profit, excluding the revaluation of process inventory, over the next 12 months. The calculation is based on listings as of March 31, 2025, and on Boliden's planned production volumes.

Change in metal prices, +10%	Effect on operating profit, SEK m	Change in TC/RC, +10%	Effect on operating profit, SEK m	Change in USD, +10% ¹	Effect on operating profit, SEK m
Zinc	850	TC Zinc	60	USD/SEK	2,100
Copper	800	TC/RC Copper	30	EUR/USD	1,300
Gold	575	TC Lead	-10	USD/NOK	220
Silver	425				
Nickel	175				
Lead	150				
Palladium	40				
Platinum	30				

¹ Currency sensitivities are based on all other currencies remaining unchanged against the USD.

The table below shows a weighted index of the prices, terms and currencies that have the greatest impact on Boliden's profits, together with a weighted currency index and a weighted metal price and treatment charge index.

Prices and terms index

Index 100 = 1 Jan 2020.

The sensitivity analysis does not take into account the effects of metal price hedging, currency hedging or the revaluation of process inventory in Smelters. Somincor and Zinkgruvan are not included in the analysis below.

Currencies and metal prices have often displayed a negative correlation that has had an equalizing effect on the Boliden-weighted index and on Boliden's earnings.

Note 7. Key ratios – The Group

For a number of years, Boliden has presented certain financial metrics in interim reports that are not defined under IFRS, and it considers these metrics to provide valuable supplementary information as they more clearly evaluate the company's performance. Not all companies calculate financial metrics in the same way, so the metrics used by Boliden are not always comparable with those used by other companies, and these metrics should, therefore, not be regarded as a replacement for

metrics defined in accordance with IFRS. The financial metrics that Boliden uses and which are not defined in accordance with IFRS regulations are: Operating profit excluding revaluation of process inventory, Operating profit, Free cash flow, Net debt, Return on capital employed, Return on Equity, Net debt/Equity ratio, Equity/Assets ratio, Net payment capacity and Net reclamation liability. For definitions, explanations and calculations of the financial metrics used by Boliden, see www.boliden.com under Investor Relations.

SEK m	Quarter			12 months	Full-year
	1-2025	1-2024	4-2024	Apr-Mar	2024
Return on capital employed ¹ , %				18.9	17.6
Return on equity ² , %				17.8	16.7
Equity/assets ratio, %	58	56	56	58	56
Net debt/equity ratio ³ , %	13	21	16	13	16
Net reclamation liability ⁴	3,869	3,452	3,839	3,869	3,839
Net debt	8,728	12,386	10,662	8,728	10,662

¹ Operating profit divided by average capital employed.

² Profit after tax divided by average equity.

³ Net debt divided by equity at quarter the end of the period.

⁴ Reclamation liability less capitalized reclamation costs at the end of the period.

Boliden Interim Report Q1 2025

The Boliden Interim Report Q1 2025 is published in Swedish and in an English translation. The Swedish version takes precedence in the event of any discrepancies between the two versions.

Inaugurating the world's most climate-efficient zinc smelter

Marking the delivery of one of Boliden's biggest investments so far, the inauguration of the expanded Boliden Odda zinc smelter was held on March 17, 2025. The project, often referred to as Green Zinc Odda 4.0, has included the construction of new state-of-the-art facilities for almost all parts of the smelting process from the receipt of mine concentrate to delivery of casted zinc.

"The success would not have been possible without the massive dedication of our employees and contractors working day and night to make this happen. The Odda zinc smelter has been around for 100 years and with this expansion we are moving strongly into our next century," says Boliden Odda General Manager Helene Seim.

Besides an enhanced ability to extract further by-products from complex raw materials, the expanded smelter's annual production capacity will increase from 200 to 350 ktonnes. This equals about 1,000 tonnes of cast zinc per full-time employee and will greatly contribute to Boliden's 2030 climate target of average greenhouse gas emissions from production in line with our defined level for Low-Carbon Zinc.

Financial calendar

- **July 18, 2025**
Interim Report for the second quarter 2025
- **October 22, 2025**
Interim Report for the third quarter 2025
- **February 3, 2026**
Interim for the fourth quarter and full year 2025
- **April 28, 2026**
Interim Report for the first quarter 2026 and Annual General Meeting

Media and financial webcast

Wednesday April 23, at 09:30 (CEST)

Live webcast:
